Healthcare Data Specialists

Since 1979 our network of healthcare information technology experts has become a Virtual Network of EHR/ERP/ECM Subject Matter Experts & Data Specialists that brings together the most knowledgeable team of Healthcare IT professionals. Leveraging state-of-the-art technology, our teams are poised to engage at a moment's notice. Through innovative customized services and products, the best solution(s) will be achieved, guaranteeing Palmetto Solutions will exceed customer expectations.

SOLUTIONS

DATAcoast™ Solutions Suite – A dynamic Legacy Data Solution (Data Archive) that provides a unique, customizable approach, that guarantees ALL data will be available accurately just as it was originally across multiple vendor platforms. A built-in Release of Information (ROI) module allows quick and accurate ROI results inhouse or outsourcing. An innovative solution that does not archive or retire data to cold storage waiting to be used, thus forgotten, rather, keeps all datasets active, relevant with future legal healthcare requirements, immediately available at point of care, and predicting future patient health trends through analytic modeling.

DATAcoast™ Suite Features:

- Search all legacy systems, results grouped as needed by patient encounter, employee, fiscal year, etc. and displayed in customized viewer
- DATAcoast ROI™ provides ROI results accurately either inhouse or remote
- DATAcoast API™ provides clinical data for active EHR/EMR at point of care
- DATAcoast AR™ allows working down of AR balances
- HIPAA audit logging and reporting
- Accepts all datasets & all file types (not transformed, stays in original format)
  - o General Financials: GL, AP, FA, MM, PR, HR
  - o Patient Data: Patient Financials, Demographics, Encounters, Clinical
  - o Discrete data, encoded documents, scanned documents, images
  - o Unstructured data

Data Modeling Assistant (DMAssistant™) – An innovative Data Modeling tool used in analyzing and understanding your SQL database structure. Every implementation is tailored to the unique configuration of the database(s). Current EHR databases: Allscripts Paragon, MEDITECH Magic & C/S, and Epic.

DMAssistant™ Features:

- Analyzes metadata, interconnections, fields, functions, stored procedures
- Provides the calculations for 'calculated values' not in the database
- Search and cross-referencing capabilities locally & across multiple databases
- Assists the novice and experienced report writer with the hard to find datasets
- Assists in extracting all tables/fields from source system(s) to a SQL database
